SUMMARY

Cloud DevOps Engineer with over 3 years of professional experience in the IT industry. Demonstrates an excellent blend of technical, consulting, and management skills. Expertise demonstrated in **cloud services**, complemented by a rich development background. Proficient in GitHub workflows for **CI/CD**. A strong collaborator with cross-functional teams, adept troubleshooter, and **quick learner**.

WORK EXPERIENCE

Motorola Solutions.

June 2023–Present

Cloud DevOps Engineer

Bengaluru, KA

- Led development of **Python** and **Node.js** services to automate Kubernetes cluster provisioning using **Cluster API**, supporting **self-managed clusters**, **EKS**, **AKS**, **GKE**.
- Built idempotent provisioning services for full cluster lifecycle (create/scale/upgrade/delete), with robust retries, health checks.
- Created Python CLIs and automation scripts for day-2 operations (node pool management, rolling upgrades)
- Led design of an operator-driven provisioning platform that automates infra, observability, security service installs on Kubernetes using microservices.
- Built request flow where Core Service validates/normalizes, Service Provider orchestrates, and Helm Service deploys **Operators** and applies **CRs** to install services reliably.
- Containerized provisioning services and shipped through **CI/CD** pipelines (**GitHub**), enforcing linting, tests, and policy gates before deploy.
- Hardened cloud access with least-privilege **IAM/Role** assignments and cloud-native secret management, aligning with security baselines.
- Optimized cluster cost and reliability via autoscaling policies and standardized machine sets, enabling right-sizing across environments.
- Scaled the platform with parallelized installs and reusable Helm templates, cutting duplicate config and improving change velocity.
- Reduced cluster bring-up time by **[99.6%]** (from **[3 weeks]** to **[2 hours]**); eliminated manual toil for **[32]** infra, observability, security services.

Motorola Solutions.

Mar 2022– May 2023

Intern

Bengaluru, KA

- Built an end-to-end GCP data pipeline that ingests Jira and Azure DevOps weekly and powers executive Looker Studio dashboards used in Monday business reviews.
- Built a secure device onboarding and registration workflow for a private edge cloud, enabling **zero-touch provisioning**, unique device identity, and auditable enrollment (Edge, PKI/JWT-ready).
- Developed an **operator-style** controller to orchestrate **Podman** containers on edge devices with validation, health checks, dependency ordering, self-healing -streamlining deployments from manual steps to one-click releases.
- **Key tech keywords:** Podman, systemd, Operator pattern, Edge/IoT, Redis, CI/CD.

CERTIFICATION & SKILLS

- **AWS Certified Solutions Architect – Associate** validate at- [link](#)
- **Cloud:** Amazon Web Services (Certified), Microsoft Azure, Google Cloud Platform
- **Containers & Orchestration:** Docker, Podman, Kubernetes, EKS, AKS, GKE, Custom Operators

- **CI/CD:** GitHub Actions (Workflows)
- **Languages & Scripting:** Python, NodeJs, Bash, Powershell
- **Package & Deployment:** Helm, Terraform
- **Version Control:** Git
- **Database:** MySQL, Azure Cosmos DB, GCP Firestore
- **Documentation & Tracking:** JIRA, Confluence

EDUCATION

Koneru Lakshmaiah University

Degree (Bachelor of Engineering), Majors (Computer Science Technologies)

2019 - 2023

Guntur, AP

ACTIVITIES

- HACKOLADES AWARD - Won “Palo Alto AI Runtime Security” award at Motorola Solution’s 2025 Open Innovation Hackathon, a high-stakes, global 48 hour challenge advancing mission-critical innovation.
- Received a 5 star rating from the manager for contributions to the project and ranked in the top 5%.
- Volunteered as a New Joiner's Buddy and assisted new candidates by mentoring them.
